Ladew Fieldtrip Program Descriptions:

Starting in 2021, all tours take place exclusively outdoors; no indoor group introductions.

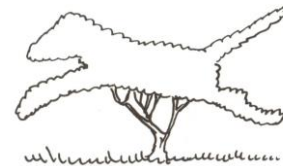

A visit to the butterfly house is included in all tours scheduled for July through September.

Fun in the Gardens

Grades: Pre-K – 6th **Trip Length:** 1 to 1 ½ hour

Season: Spring, Summer & Fall (April through October)

Students will experience a general tour of the gardens using a scavenger hunt. They will examine the topiary, explore the ponds for frogs and fish, observe birds and insects and learn some history of Mr. Ladew's life and garden designs.

Signs of Fall / Signs of Spring

Grades: pre-K – 1st **Trip Length:** 1 to 1 ½ hour

Season: September through October / late March through mid-May

Come observe the many signs of the season in the gardens. In the spring, encounter blooming flowers, tadpoles changing to frogs, and birds building nests. In the fall, discover beautiful leaf colors and shapes, emerging fruits and seeds, and busy animals preparing for the changes ahead.

From Seed to Flower

Grades: pre-K – 3rd **Trip Length:** 1 ½ hour

Season: late March through May

Students will examine the parts and functions of seeds, as well as explore the gardens in search of seeds and the flowers and plants they grow into. While observing signs of the season, students will witness and discuss concepts including pollination and seed dispersal.

Trees are Terrific

Grades: pre-K – 5th **Trip Length:** 1 ½ hour

Season: September through October / last week in April through May

Students will discover the important uses, functions and parts of trees through various sensory activities, primarily on the Nature Walk forest trail. Students will identify trees based on physical characteristics and observe the wildlife with which they interact everyday.

Exploring Habitats

Grades: 2nd – 8th **Trip Length:** 1 ½ to 2 hours

Season: September through October / late April - May

Students will explore and characterize the meadow and forest habitats of Ladew's Nature Walk. Common plants and animals found in each habitat will be identified and the resources needed for survival will be recognized. Emphasis will be placed animal adaptations, biodiversity and on the importance of interrelationships between all living things.
